Inspection Services

Sampling

The Standard ANSI / ASQ Z1.4-2008 (Equivalent to MIL-STD-105 E, ISO 2859) is followed for sampling plans. You can refer the AQL Sampling plan table from below link. Size of the sample and unbiased representative selection of the sample is a vital part of the inspection process. Internationally most widely used accepted sampling plan is single sampling plan, Inspection general level.

Workmanship Check

The products are randomly pulled as per the sample size, the QC will check the products visually against customer approved sample or contract specification and all non-conformities are recorded based on below category of defects.

Acceptable Quality Level

Generally for the workmanship check, Internationally most widely followed AQL - Accept or Reject criteria for consumer goods is critical 0.0, Major 2.5 and Minor 4.0 defectives for consumer goods.

On Site Test

This test includes Functionality, Safety and regulatory of the product. On site test results are carried out as per the facility available in the factory and it is not a complete or replacement of Laboratory test results. Onsite tests give tentative or approximate idea to customer on the functionality of the product.

Your Ears & Eyes in the Factory

The report of Final Random Inspection mentioned with the findings of all aspects of product quality in a detailed manner helps customer to view the product standards from their place instead of travelling or visiting the manufacturing country / locations to take decisions of shipment.

Techniques

Customized QC checklist for each inspection is prepared based upon contract specifications, customer / regulatory / safety requirements, and product category before a day of Inspection date.

8/334, Annapoorna Layout,
Gandhi Nagar Post,
Gandhi Nagar, Tirupur - 641603. India.
